## Contents

Preface xvii  
Acknowledgments xviii  

### 1 Introduction to the Practice of Ophthalmology 1  
- Practicing Ophthalmology 1  
- Responsibilities of the Resident 2  
  - Stress During Residency Training 3  
  - Recognizing Stress and Its Sources 4  
- Dealing with Early Discouragement 5  
- Ethical Considerations 5  
- Education and Training 6  
- Pitfalls and Pointers 7  
- Suggested Resources 7  

### 2 Overview of the Ophthalmic Evaluation 9  
- History 9  
- Examination 10  
- Ophthalmic Equipment 10  
- Ancillary Equipment 12  
- Physician Demeanor and Approach to the Patient 12  
  - Pediatric Patients 13  
  - Elderly Patients 13  
- Medical Record Keeping and Communication 14  
- Pitfalls and Pointers 15  
- Suggested Resources 15  

### 3 History Taking 17  
- Goals of the History 17  
- Methods of Recording the History 18
Components of the History 18
   Chief Concern 18
   History of the Present Illness 19
   Past Ocular History 22
   Ocular Medications 22
   General Medical and Surgical History 23
   Systemic Medications 23
   Allergies 23
   Social History 24
   Family History 24
   Review of Systems 24
Pitfalls and Pointers 24
Suggested Resources 25

4 Visual Acuity Examination 27
   Testing Conventions and Materials 27
      Measurement Notation 27
      Test Targets 28
      Standard Abbreviations 29
   Testing Procedures 30
      Distance Acuity Test 30
      Pinhole Acuity Test 31
      Near Acuity Test 31
      Other Tests of Near Vision 32
   Acuity Tests for Patients with Special Needs 32
      Low-Vision Testing 33
      Testing Children and Special Adults 33
   Variables in Acuity Measurements 35
   Uncorrectable Visual Acuity 37
      Amblyopia 38
   Other Tests of Sensory Visual Function 39
   Pitfalls and Pointers 40
   Suggested Resources 40

5 Refraction 47
   Overview of Refraction 47
   Overview of Ophthalmic Optics 48
      Principles of Vergence 48
      Types of Lenses 49
Contents

Refractive States of the Eye 53
Lens Notation 54
  Lens Transposition 54
  Spherical Equivalent 55
Lensmeter 55
Retinoscopy and Refinement 56
  Instrumentation 56
  Retinoscopy Technique 59
  Neutralization with a Retinoscope 61
  Determining Cylinder 62
  Summary of Retinoscopy Steps 64
  Refinement 64
  Cycloplegic Refraction 68
  Duochrome Test 68
  Binocular Balancing 69
  Near Point and Reading Add 71
Guidelines for Prescribing Glasses 72
  General Prescribing Guidelines 72
  Prescriptions for Myopia 73
  Prescriptions for Hyperopia 74
  Prescriptions for Astigmatism 75
  Prescriptions for Presbyopia 75
Optical Fitting Considerations 76
  Pantoscopic Tilt 76
  Interpupillary Distance 77
Pitfalls and Pointers 78
Suggested Resources 79

6 Ocular Motility Examination 85

Strabismus Terminology 85
Motility Terminology 86
Function of the Extraocular Muscles 88
Ocular Motility Examination 89
  Overview of Examination 89
  Evaluation of Eye Movements 90
Tests of Alignment 90
  Red Reflex Test 91
  Corneal Light Reflection Test 91
  Cover Tests 92
  Other Considerations with Alignment Tests 95
Tests of Binocularity and Fusion 96
  Stereopsis 96
  Other Tests of Binocular Status 97
Pitfalls and Pointers 100
Suggested Resources 100

7 Pupillary Examination 105

Anatomy of Pupillary Pathways 105
  Parasympathetic Pathway (Light-Reflex Pathway) 105
  Near-Reflex Pathway 107
  Sympathetic Pathway 107
Examination of the Pupils 108
  General Pupillary Observation 108
  Light-Reflex Test 109
  Swinging Flashlight Test 109
  Near-Reflex Test 109
Abnormal Pupils 110
  Iris Abnormalities 110
  Relative Afferent Pupillary Defect 111
  Light–Near Dissociation 112
  Horner Syndrome 112
  The Fixed and Dilated Pupil 113
Pitfalls and Pointers 115
Suggested Resources 115

8 Visual Field Examination 119

The Visual Field 119
Screening Tests 121
  Confrontation Fields Testing 121
  Amsler Grid Test 121
  Special Situations 122
Manual Perimetry 122
Automated Perimetry 123
  Test Targets and Strategies 124
  Interpretation of a Computerized Printout 124
Common Visual Field Defects 126
  Localizing Visual Field Defects 128
  Progression 128
Pitfalls and Pointers 128
Suggested Resources 129
9  External Examination  135

Situating the Patient  135
  General Observation  135

Inspection  136
  Head and Face  138
  Orbit  139
  Eyelids  141
  Lacrimal System  143
  Globe  143

Palpation  145
  Head and Face  146
  Orbit  146
  Eyelids  146
  Lacrimal System  147
  Globe  147

Auscultation  148

Pitfalls and Pointers  148

Suggested Resource  149

10  Slit-Lamp Biomicroscopy  167

Uses of the Slit Lamp  167

Parts of the Slit Lamp  167
  The Viewing Arm  168
  The Illumination Arm  168
  The Patient-Positioning Frame  169
  The Base  169
  Other Attachments  170

Preparing and Positioning the Patient  170

Principles of Slit-Lamp Illumination  171
  Diffuse Illumination  171
  Direct Focal Illumination  171
  Specular Reflection  172
  Retroillumination  174
  Indirect Lateral Illumination  175
  Sclerotic Scatter  175

Special Techniques  176
  The Slit Lamp as a Measuring Device  176

Gonioscopy  177
  Fundus Examination with the Slit Lamp  177
  Goldmann Tonometry  177
  Slit-Lamp Photography  178

Pitfalls and Pointers  178
11 Anterior Segment Examination 179

Overview of the Anterior Segment Examination 179
Lacrimal Gland and Periorbital Skin 180
Eyelid and Eyelashes 181
  Benign Lesions of the Eyelid 181
  Blepharitis 182
  Malignant Tumors of the Eyelid 184
Conjunctiva 184
  Palpebral Conjunctiva 184
  Limbal Conjunctiva 188
  Bulbar Conjunctiva 189
  Other Conjunctival Abnormalities 192
Episciera and Sclera 193
  Episcleritis 193
  Scleritis 193
  Pigmentations 195
  Involutional Hyaline Plaques 195
Tear Film 196
  Overall Wetness 196
  Tear Meniscus 196
  Tear Film Breakup Time 197
  Other Tear Film Abnormalities 197
Corneal 197
  Epithelium 197
  Bowman Layer 199
  Stroma 199
  Descemet Membrane 202
  Endothelium 202
Anterior Chamber 203
  Anterior Chamber Depth 203
  Flare and Cell 204
  Hyphema and Hypopyon 204
Iris 205
  Nodules 205
  Neovascularization 206
  Tumors 206
  Persistent Pupillary Membrane Remnants 207
  Other Abnormalities 207
Crystalline Lens 207
  Cataract 208
  Subluxation and Luxation 212
  Other Conditions 212
Contents

Retrolental Space and Anterior Vitreous 213
Gonioscopy 213
Stains 216
  Fluorescein 216
  Rose Bengal 217
  Lissamine Green 217
Pitfalls and Pointers 218
Suggested Resources 218

12  Tonometry 223

IOP Measurement Conventions and Population Means 223
Types of Tonometers 223
  Applanation Tonometers 224
  Indentation Tonometers 224
Goldmann Applanation Tonometry 225
  Disinfection of the Applanating Tip 226
Corneal Pachymetry 226
Pitfalls and Pointers 227
Suggested Resources 228

13  Posterior Segment Examination 233

Anatomical Landmarks 233
Pupillary Dilation 237
Instrumentation for Examination 238
  Indirect Ophthalmoscope 238
  Slit-Lamp Biomicroscope 238
  Direct Ophthalmoscope 240
Indirect Ophthalmoscopy 241
  Headset Adjustment 242
  Choosing and Positioning the Condensing Lens 243
  Changing Position to View Different Fundus Areas 244
  Sequence of the Examination 244
  Scleral Depression 246
Posterior Segment Examination with the Slit Lamp 249
  Indirect Slit-Lamp Biomicroscopy 249
  Contact Lens Biomicroscopy 250
Direct Ophthalmoscopy 251
  Overview of the Examination 251
14 Ophthalmic Emergencies 279

Emergency Equipment and General Evaluation 279
    Pediatric Evaluation 280
Ocular Trauma in the Emergency Setting 281
    Corneal Abrasion 281
    Corneal Foreign Body 282
    Eyelid Laceration 283
    Closed-Globe Injuries 283
    Traumatic Hyphema 284
    Orbital Fracture 285
    Open-Globe Injuries 286
    Retrobulbar Hemorrhage 287
Ocular Infections in the Emergency Setting 287
    Acute Conjunctivitis 288
    Ophthalmia Neonatorum 288
    Microbial Keratitis 289
    Dendritic Keratitis 290
    Preseptal and Orbital Cellulitis 291
    Endophthalmitis 293
Other Ocular Emergencies 293
    Acute Angle-Closure Glaucoma 293
    Ocular Chemical Burn 295
    Central Retinal Artery Occlusion 296
    Arteritic Anterior Ischemic Optic Neuropathy 297
Retinal Tears and Rhegmatogenous Retinal Detachments 298
Vitreous Hemorrhage 300
Pitfalls and Pointers 300
Suggested Resources 301

15 Common Ocular Medications 305

Anesthetic Agents 306
Dyes 306
Anti-Infective Agents 306
Anti-Inflammatory Agents 306
  Corticosteroids 306
  Immunomodulating Drugs 310
  Nonsteroidal Anti-Inflammatory Drugs 310
Mydriatics and Cycloplegics 310
Glaucma Medications 311
  More Commonly Used Agents 313
  Less Commonly Used Agents 315
Decongestant, Vasoconstrictive, and Anti-Allergy Agents 315
Lubricating Medications and Tear Substitutes 316
Corneal Dehydration Medications 316
Agents Delivered by Intravitreal Injection 316
  Anti-Vascular Endothelial Growth Factor (anti-VEGF) Agents 316
  Anti-Inflammatary Agents 317
  Anti-infective Agents 318
Suggested Resources 318

Index 321
Activities

5-1 Retinoscopy Simulator 64
6-1 Extraocular Muscles 89
6-2 Strabismus Simulator 90

Clinical Protocols

4-1 Testing Distance Visual Acuity 41
4-2 Testing Pinhole Visual Acuity 42
4-3 Testing Near Visual Acuity 42
4-4 Testing for NPA and NPC 43
4-5 Testing Acuity for Patients With Low Vision 43
4-6 Testing an Infant’s Fixing and Following Behavior 44
4-7 Performing the Induced Tropia Test in Nonstrabismic Infants 45
5-1 Using the Manual Lensmeter 79
5-2 Measuring Bifocal Power 81
5-3 Measuring Prism Power and Orientation 81
5-4 Measuring Optical Centration of Spectacle Lenses 82
5-5 Measuring Vertex Distance 83
6-1 Assessing Versions 101
6-2 Performing the Corneal Light Reflex (Hirschberg) Test 101
6-3 Performing the Krimsky Test 101
6-4 Performing the Cover-Uncover Test 102
6-5 Performing the Prism Alternate Cover Test 102
6-6 Testing Fixation Preference in Strabismic Patients 103
6-7 Testing for Stereoacuity Using the Titmus Fly Stereopsis Test 103
7-1 Performing the Light-Reflex Test 115
7-2 Performing the Swinging Flashlight Test 116
7-3 Performing the Near-Reflex Test 117
8-1 Performing the Confrontation Fields Test 129
8-2 Performing the Amsler Grid Test 133
9-1 Performing a Neurosensory Examination of the Head and Face 149
9-2 Measuring Binocular Interpupillary Distance 151
9-3 Performing Exophthalmometry 151
9-4 Measuring Globe Displacement 153
9-5 Measuring Eyelid Position 154
9-1 Equipment for Examining the External Eye 137
9-2 Common Abnormalities and Characteristics of the Skin 139
9-3 Common Abnormalities of the Eyelids, Eyelashes, and Eyebrows 142
9-4 Normal Adult Values of Eyelid Structure and Function 142
9-5 Method of Grading Degree of Upper Eyelid Blepharoptosis 143
9-6 Method of Grading Degree of Upper Eyelid Retraction 143
9-7 Method of Grading the Anterior Chamber Angle 145
11-1 The SUN Working Group Grading System for Anterior Chamber Flare 204
11-2 The SUN Working Group Grading System for Anterior Chamber Cells 204
11-3 Shaffer Method for Grading Anterior Chamber Angles 215
13-1 Anatomical Features of the Posterior Pole 235
13-2 Agents for Pupillary Dilation 237
13-3 Cycloplegic Protocol for Infants and Children 238
13-4 Comparison of Instruments for Posterior Segment Examination 239
13-5 Illumination Openings of the Direct Ophthalmoscope 251
13-6 Focusing the Direct Ophthalmoscope 252
13-7 Color Code for Fundus Drawing 256
13-8 Major Features of the Posterior Segment 261
13-9 Normal Degenerative Changes of the Aging Eye 261
13-10 Common Problems During Indirect Ophthalmoscopy 266
15-1 Common Antifungal Agents 307
15-2 Common Topical Ophthalmic Antibacterial Agents 308
15-3 Common Antiviral Medications 309
15-4 Common Mydriatics and Cycloplegics 311
15-5 Common Glaucoma Medications 312

Videos

CP 4-1 Visual Acuity 41
5-1 Retinoscopy Basics 60
5-2 Retinoscopy: Plus Cylinder Technique 62
CP 5-1 Neutralization of Spectacles 80
6-1 Krimsky Test 92
6-2 Cover-Uncover Test 93
6-3 Cross-Cover Test (Alternate Cover Test) 94
6-4  Prism Alternate Cover Test  94
6-5  Simultaneous Prism Alternate Cover Test  94
